The 8 Best Robot Vacuums 2017

Here are the best robot vacuums on the market today.

In the past several years, robot vacuums have surged in popularity, but they are still somewhat of a luxury item given that our least expensive pick costs more than £100. They are better suited to routine upkeep than to deep cleaning, just because you have a robot vacuum, doesn't mean you can get rid of your upright vacuum completely, but if you want to save that upright less often, this is a great tool to have in between.

01 Neato Botvac Connected

Pros / This robot vacuum cleans close to edges and around furniture.

Cons / The hair sticks to the brush rollers easily, which makes cleaning your robot vacuum a bit more labor consuming than other bots on our lineup.

Verdict / The Neato Botvac Connected contains almost all the features you could want in a robot vacuum. It has powerful suction, its design allows it to get close to walls, and it includes a smartphone and tablet app that lets you choose its schedule - even if you're not home.

02 iRobot Roomba 980

Pros / This robot vacuum is easier to maintain than any other robot vacuum in our lineup.

Cons / The app doesn't send push notifications to let you know when your robot is doing.

Verdict / The iRobot Roomba 980 effectively cleans your home - both on carpet and hard, but it's... and gives you power to make your job, so it's not a clean machine, and where your robot has cleaned and even locate your robot at from your smartphone.

03 Samsung POWERbot

Pros / This robot vacuum had the greatest overall cleaning power of all the bots in our lineup.

Cons / It isn't intuitive to use, and support is lacking for this unit.

Verdict / The Samsung POWERbot excels in the most important category: cleaning. It also has an impressive navigation system that prevents it from bumping into most obstacles in its path. However, Samsung's user support couldn't help us in finding filter or battery replacements.

04 bObsweep bObi

Pros / The bObsweep bObi has a variety of useful support services.

Cons / There are no virtual or physical boundary markers to keep the vacuum in place.

Verdict / Despite limited ways to keep it within boundaries, the bObsweep bObi is powerful enough to clean big messes and is easy to learn and maintain.

05 iRobot Roomba 650

Pros / There are online tutorials and a thorough user manual for support.

Cons / The Roomba 650 lacks a remote control.

Verdict / With its strong help tools, you can learn to use the iRobot Roomba 650 for a cleaning task that fits your home.

06 Miele Scout

Pros / It is quiet enough to not be disturbing.

Cons / There is no virtual wall and only is short marker to keep the vacuum within boundaries.

Verdict / The Miele Scout 980 picks up messes thoroughly and quietly when it is not hampered by a lack of boundaries.

07 Neato XV

Pros / The Neato XV Signature Pro has a laser scanner mapping system that allows it to clean in an efficient, straight path rather than bumping off walls and furniture.

Cons / The lack of a remote control or virtual wall can make the vacuum difficult to use.

Verdict / A strong mapping system makes up for a less attractive collection of accessories and boundary markers.

08 Moneual RYDIS

Pros / It cleans up debris of differing consistencies well.

Cons / There are no boundaries, markers or virtual walls to keep it out of unwanted areas.

Verdict / The Moneual RYDIS High Pro can clean messes up without leaving a lot behind, but there is not as much control over where it is going and how much power it uses.
