Professional Experience and Curriculum Vitae

I design & build websites.

I like building sites that are a bit different from stuff out there. Most of my clients are creatives so when given the freedom I use it to the best of my ability.

I used to build websites exclusively using FLASH technology but in the past year have focused on delivering sites using newer, lighter weight technology like HTML5, CSS3 & jQuery, which means they can also work on mobile devices such as iPads + iPhones.

I also provide Content Management and full Web-Hosting right up to dedicated servers.
