Professional Experience and Curriculum Vitae

PR Designs, based in the North West of England, provide a range of services that cover mechanical design, product design and industrial design to a wide range of clients. From an initial meeting with the client we provide a specification sheet laying out the project objectives, time scales and estimated costs. Work commences as agreed and regular feedback is provided to keep the client informed of progress and any problems that may be encountered. The use of MS Office products to track project progress and to communicate electronic 3D visualisations is used. Once the client is satisfied, a full set of 2D engineering drawings to BS308 are compiled, along with any relevant technical documentation to enable purchase of specified OEM products.
