We believe true Innovation must consider everything.

We take our passion for innovation beyond our products and into our practices. As part of our continuing mission to leave the world better than we found it, we're partnering with The Conservation Fund to protect and create the type of forests we use in our packaging. We've developed a renewable micro-hydro system to power our data center in Wendle, Oregon. And we're building a solar farm in China to offset energy used by our offices and retail stores. Because it's our responsibility to make sure that while creating beautiful products, we're also caring for our beautiful planet.

POWERWALL
TESLA HOME BATTERY

Tesla Energy
For Businesses and Utilities

Tesla Energy allows businesses to reduce peak demand charges, shift energy consumption profiles, and participate in available grid markets. For utilities, Tesla Energy solutions are turn-key, fully integrated systems, designed for long life and to serve a wide array of applications, including peaker replacement/capacity provision, T&D deferral, system firming, and other market participation.

Why Powerwall?

Tesla home batteries maximize the usefulness of your solar panels and offer a variety of backup electricity supply solutions. You can even go off the grid.

- Solar electricity at night**
Powerwall stores electricity generated by solar panels during the day and makes it available to your home in the evening.
- Go net zero**
Combine solar panels and one or more Powerwall home batteries to power your home independently from the utility grid.
- Emergency backup**
In the event of a utility outage, Powerwall can power your entire home or select appliances with an uninterrupted supply of electricity.

How it Works

Solar panels
House owner generates electricity that charges Powerwall and powers your home during the day. When solar Powerwall can reduce the amount of electricity consumed by your home's lights, appliances and devices.

Inverter
The inverter converts direct current electricity from solar panels, the grid and Powerwall into the alternating current used by your home's lights, appliances and devices.

Backup panel and switch
Some backup installations may require a dedicated electrical panel containing the critical appliances and select your utility to back up. An electrical switch automatically switches the backup panel during a power company outage.

Electrical Panel
Electricity from the inverter is sent to your electrical service panel. For appliances without solar storage, electricity from the power company is sent from the electrical panel to the inverter to charge the Powerwall.

Specs

Technology
Wall mounted, rechargeable lithium ion battery with liquid thermal control.

Capacity
Each Powerwall has a 7 kWh energy storage capacity, sufficient to power most homes during the evening using electricity generated by solar panels during the day.

Model
7 kWh \$3,000
For daily cycle applications

Compatibility
Single phase and three phase utility grid compatible.

Installation
Requires installation by a trained electrician. DC-AC inverter not included.

Inverter
The inverter converts direct current electricity from solar panels, the grid and Powerwall into the alternating current used by your home's lights, appliances and devices.
