Professional Experience and Curriculum Vitae

We are a team of professional urinal experts who specialise in providing men's urinals for commercial and business environments. We provide expert advice and stock a range of urinal products and brands, including waterless urinals, flushing urinals and urinal accessories.

Waterless urinals in particular have become a very popular urinal in use around Australia. Due to the dry conditions down under, there is a high demand for water conservation in commercial buildings and operations. Waterless urinals are one of the ways that business work to reduce their impact on our water usage saving thousands of litres every year.

However, this shift to waterless urinals has resulted in a hygiene issue with dirty and smelly urinals because they are no longer being flushed. This is not a characteristic that waterless urinals should have and is often characteristic of bad maintenance. While waterless urinals don't need to be flushed they do need to be maintained. This is another area where we come in, providing the right guidance and expertise in the area of waterless urinal management and maintenance.
