British E-Waste And How Much Money Go To Waste?

E-Waste Generated per Year (2013, in millions of tonnes)

Britain ranks **sixth** in the world for total amount of e-waste generated per year, and is the worst offender in the EU

Per Head of Population a Year - **21.8 kg**

Britain is one of the **worst-performing** countries regarding the amount of e-waste produced per head of population

The Cost of British E-Waste

Britons have at least **£1 000 000 000** worth of electrical and electronic equipment in their homes that is no longer used.

Changing how we design, make, buy and dispose of electrical and electronic equipment could not only reduce Britain's carbon footprint by up to **15 per cent**, but also add **£800M** to the UK economy.

A **quarter of the products** taken to waste recycling centres are in working order and could be resold for an estimated **£200M** each year.

The market for trading pre-owned equipment could be worth up to **£3 000 000 000**

Ten million tonnes of electronic products will be bought in the UK in the next six years alone. This amount will include 20 tonnes of gold, 400 tonnes of silver and seven tonnes of platinum-group metals – worth some **£1.6BN**

There's **more gold** in a ton of used mobile phones than there is in a ton of gold ore.

Every year, the **average household in the UK** spends about **£800** on new electrical and electronic goods. This equates to about 1.4 million tonnes of electrical and electronic goods. A similar amount is thrown away.

What You Could Buy with the British E-Waste

To summarise: Britons throw away a staggering £200 million worth of recyclable electrical appliances every year. They also have at least £1 billion worth of electrical and electronic equipment in their homes which is no longer used. WRAP estimates the UK market value for trading pre-owned equipment could be worth up to £3 billion. Also, encouraging trade-in of used electrical and electronic items could grow UK GDP by around £800 million per year. That makes total of **£5 billion** in lost profits, which is the cost of.

2000 X **100 foot luxury yacht**

20 X **Boeing 747**

1100 X **Lamborghini Veneno Roadster**

7 X **Wembley Stadium**

625 000 X **Square Meter Apartment in Central London**

5 X **Buckingham Palace**
