Professional Experience and Curriculum Vitae

Hello there, everyone. David Pillow is my name. I work as the NoiseBuster website's webmaster and administrator. Our team is working hard to make the website as user-friendly and informative as possible for our existing and prospective customers.

Now I'd like to tell you a little bit about our business and our products. In 1998, the world's first fully-certified ANR safety earmuffs were introduced to the personal protection equipment market, combining traditional passive attenuation with active noise cancellation technology. The NoiseBuster® ANR Safety Earmuff is by far the most effective hearing protection device on the market today, with an ANSI-certified passive NRR (noise reduction rating) of up to 26dB and electronic active noise cancellation of up to 20dB.

The noise generated by engines, engines, engines, vacuum systems, blowers, generators and fan can effectively not be attenuated by traditional passive earmuffs and earplugs. Long-term exposure to low frequency noise may cause hearing loss, like any other noises. This protracted exposure also has non-auditory effects such as anxiousness, high blood pressure, heart disease, lack of concentration and decreased productivity.

Our products provide both consumer and industrial markets with enhanced hearing protection, intelligibility, comfort and audio quality. The mission of our firm is to deliver advanced, convenience, competitiveness and high-quality products that enhance hearing protection, improve listening comfort and enhance communication intelligibility in bright environments.

The NoiseBuster® has received several design and use prizes for the advanced technology over time. Over the years.

Ten years since NoiseBuster® ANR Safety Earmuff was created, this line includes over-the-head, behind-the-head and hard-hat casing assemblies to meet any industrial organization's hearing protection requirements.

In addition, our products satisfy a fundamental need: up to 30 million U.S. workers are susceptible to dangerous noise at their place of employment, according to the National Institute for Safety and Health.

Today, NoiseBuster® ANR Safety Earmaff protects the hearing of its people and offers them a more comfortable and safe working environment, using several of the largest companies around the globe.
