There are both hard-sided and soft-sided coolers in this series for you to choose from. But for this review, we will be giving the spotlight specifically and entirely to the Igloo Marine Ultra Cooler model from this series. While this is not quite known as the best cooler for price, let us guide you through the pros and cons to this extraordinary cooler coming from the house of Igloo.

The Pros:

The Igloo Marine Ultra cooler series is a special one. Having mentioned before some of the specific features that the Igloo brand has blessed the models from the Igloo Marine Ultra series with, it would not be doing this model a justice if the special construction of the outer shell is not mentioned.

Have you ever wondered why all the models from this series share the same white color? That is because the developers at Igloo figured that the white color is the best color to repel sunlight and fight against color fading, a common problem with outdoor coolers and especially among coolers on boats like the Igloo Marine Ultra.

As extra care, the outer shell of this series of good coolers is also armed with a layer of UV protection to further allow it fighting against long exposure to intense sunlight; a crucial feature when considering that this cooler is intended to spend most of its time outdoors in the sun adventuring on a boat.

And last but not least, because the developers at Igloo figured that the cooler would be spending a majority of its time in a very wet and humid environment, they have equipped the outer shell of this cooler with extra care to fight against mold and mildew, furthering bolstering its durability and lifespan.
