## Professional Experience and Curriculum Vitae

I am a visual designer who loves working in the field of web design. Within the web design, I have more affinity with the interface design / art direction and coding html / css, but I also own notions of information architecture, wireframes, usability and accessibility. I like to research technologies that facilitate the work of a web designer, I am beginning to study jQuery, though I turn well with the available plugins, and I love to use twitter to stay updated about the latest developments in the field of design and technology.
