WHAT DO YOU NEED TO KNOW ABOUT...

WINDOW CLEANING

DIFFERENT TOOLS, TECHNIQUES AND MORE

WINDOW CLEANING

is the cleaning of architectural glass used for structural, lighting, or decorative purposes.

STATISTICS

show that a window at home requires an average of 12 minutes of cleaning.

TOOLS

required for the window cleaning process are basic.

A SQUEEGEE

A WATERBUCKET

and some soapy water.

FOR TALLER BUILDINGS AND HIGH WINDOWS

extending poles are used. Depending on their range, their length can be increased up to four meters. These also come with a water-feeding option which feeds water mixed with chemical agents to the tip.

REALLY REALLY TALL BUILDINGS

require climbing gear OR suspended platforms.

THE DANGERS OF BEING A WINDOW CLEANER

Scotland is one of the few countries which require a license for window cleaning.

Window cleaning is the second most dangerous job in the UK with an average of 17 deaths and over 60 injuries every year.

WOMEN vs MEN

in the fight who cleans more women win with an average of 2 hours and 36 minutes per day compared to 1 hour and 34 minutes

THE FUTURE OF WINDOW CLEANING

Because of these statistics science is making way towards the future of window cleaning - robots and automatic window cleaning systems. These will not only lower the risks but will reduce the amount of resources needed too.
