Professional Experience and Curriculum Vitae
300,000 apps are in the iTunes App Store. That number is climbing everyday. So when you build your app, you need to make sure you do it right. Rocksauce Studios assigns a team of Samurai who tailor your app for success.

Sometimes the best option is a suite of features. Sometimes we suggest you design something with less elements, focusing on a niche segment of the market. And when there are too many apps vying for the same users, we'll be honest and tell you the market is oversaturated.

It's a simple idea – look at the marketplace, analyze what works and what doesn't, and create the right product. One that's poised to grab attention and win the space.

Our core beliefs are built upon testing, designing and deploying – using the feedback we receive directly from your potential users to ensure the highest quality product on the market. Your team will collect the data, distill the information and build a feature-right, gorgeous app for the iPhone, iPad, Android or Mobile platform.

And when the app is done, we'll help you discover the right routes to take for marketing and develop a road map for future releases and in-app purchasing.
