Professional Experience and Curriculum Vitae

Hi, there!

I'm Miša - young artist, interested in every aspect of creation processes.

My architecture studies started in 2008 at Union – Nikola Tesla University, the Faculty of Building Management, Department of Architecture and Urbanism in Belgrade, Serbia. Currently, I am on the 4th year of my studies which is also the final year of my Bachelor degree.

My first encounter with architecture occurred when I was just four years old. I always loved drawing and making, not just buildings, also vehicles and entire towns. Over the years I have developed a keen interest in form, especially the forms that apply to architecture and design of everyday objects. Ofcourse, form was never enough for me. Almost everything I made, had to have specific purpose. When my studies at the Architectural Technical School began a lot of things became more clear to me. I started to be convinced that the architecture is fusion of form, function and construction. Finally I was able to apply interesting forms and functions to my projects. I developed different skills in each of my endeavours which have strengthened my overall design philosophy. I have a selfish need to create, luck is that my work is worth to others. Architecture is not just more than art, a real architect is the one who lifts his creation from a selfish need, to a spiritual level in wich his personality does not exist any more. It is special state of mind when you don't think in words, you just do with minds. It is state of mind during creating scenography of someones life, wich supposes having direct influence on that life. This is a certain kind of connection with people that only an architect has.

Learning about architecture for the past eight years has allowed me to learn more about myself and how I perceive the world around me.
